Health at the UN Climate Summit

New York, September 20, 2014

This Document
On September 23, the UN Secretary General will host a day-long Climate Summit in New York, designed to build momentum towards the UN Framework Convention on Climate Change (UNFCCC).

Climate Week 2014 will see over 120 heads of state converge upon New York for a climate summit convened by UN Secretary General Ban Ki-Moon. With at least 7 health-focused events taking place during the week, it will also see many health leaders – including US Surgeon General Boris Lushniak, EPA Chief Gina McCarthy, Gro Harlem Brundtland, Editor-in-Chief of the Lancet Richard Horton, and the World Health Organisation’s Maria Neira - speak out about the significant threats to health posed by unmitigated climate change, and the clear health benefits of many climate solutions.

This document is designed for health professionals and public health organizations, and contains:

- An overview of key messages and implications of the Climate Summit for human health
- A variety of communications resources, including: recent health-relevant articles, blogs and reports; quotes from health professionals; useful images, graphics and videos; sample tweets
- Information about health and climate events held in New York this week

Key messages

1) Climate change is fast becoming a mainstream public health concern

The World Health Organization’s Conference on Health and Climate in August sought to raise the profile of this crucial public health issue before the UN summit in New York, and the Conference of the Parties in Lima this December. Following the conference, WHO Director General Dr. Margaret Chan has written an article calling for urgent action to protect health from climate change, ‘the defining issue for the 21st century’. Dr Chan states in the article’s conclusion that “climate change, and all of its dire consequences for health, should be at centre-stage... whenever talk turns to the future of human civilizations. After all, that’s what’s at stake.”
In England, a health-system wide approach has been adopted, as demonstrated by the cross-system statement for the UN Summit, which is a world first.

2) **Clean energy and active transport can save lives, carbon and money**

Dramatic health benefits and associated cost savings would result from a global transition to clean energy, avoiding millions of early deaths each year through improved air quality. As highlighted by the ActiveEarth initiative, which will be launched at the civil society event, active transportation also offers significant physical and mental health benefits, as well as reducing air pollution. The cost savings associated with these benefits have also been demonstrated by the New Climate Economy project report, *Better Growth, Better Climate*.

3) **We need to make investment choices which benefit health**

One area which has become the subject of much discussion within the health community in recent months is the role of healthy investments in building a sustainable future which promoted health. In June, members of the British Medical Association voted in favour of an end to its investments in fossil fuels and increased investment in clean energy, and last week, HESTA (the Health Employees’ Superannuation Trust Australia) announced a restriction on investments in thermal coal. A number of health NGOs released a statement at the WHO Conference, emphasising the need for health organisations to consider the climate and health impacts of their investments, and make investment choices that benefit both by reducing local air pollution, helping to build low-carbon health systems, and strengthening community resilience.

**Quotes**

“The evidence is overwhelming: climate change endangers human health. Solutions exist and we need to act decisively to change this trajectory.” – Dr. Margaret Chan, Director General of the World Health Organization (during WHO August conference)

“Here is my strong view: climate change, and all of its dire consequences for health, should be at centre-stage, right now, whenever talk turns to the future of human civilizations. After all, that's what's at stake.” – Dr. Margaret Chan (in her Huffington Post article)

“Climate change is not the equivalent of a disease: it is a symptom. The cause is our unbridled dependence on fossil fuels.” Christiana Figueres, Chair of the UN Framework Convention on
Climate Change

“Greenhouse gas pollution, through its contribution to global climate change, presents a significant threat to Americans’ health and to the environment upon which our economy and security depends.” – US EPA Chief Gina McCarthy

“We’ve now got a plan: it’s quite recent, but it’s a plan that we’ve committed to. It’s about reducing our carbon footprint, it’s about being better prepared for extreme events. And crucially, about how we invest - now - in what we’re doing, and about how that’s going to affect future generations. … We know that how we act today has an impact on the future, and we’re taking this extraordinarily seriously.” - Duncan Selbie, CEO of Public Health England on behalf of the health system in England.

“Our patients' health is being harmed by changes to our climate. The health effects of these changes are very clear. Health professionals must understand these effects and must advocate to reduce them and the consequent deleterious health effects. Actions that we can take directly and in our working environments include adopting clean energy sources and ensuring that our health systems aim to reduce dangerous emissions.” - Dr. Margaret Mungherera, President of the World Medical Association.

“The health care sector is waking up to the reality that climate change is a massive public health crisis and they need to join the movement to address it,” said Gary Cohen, president and founder of Health Care Without Harm. "Health care can lead by example in addressing its own climate footprint as well as build resiliency into its own facilities and operations. Health care professionals can raise their voices to demand policies that put a price on carbon and invest in clean energy solutions that will prevent a whole array of climate change related health impacts."

“Reducing greenhouse gases produces unplanned, but very beneficial side effects for health. … The US and Chinese governments have already embraced the message of better health in support of their recent actions against pollution from coal power plants.” said Genon Jensen, the Health and Environment Alliance (HEAL)’s Executive Director. “We hope that the health co-benefits model will be used more extensively to drive up national climate targets in all regions of the world.”

“The evidence is overwhelming: climate change endangers human health. Solutions exist, and we need to act decisively to change this trajectory.”

WHO Director General Dr. Margaret Chan

According to the World Health Organisation, air pollution caused 7,000,000 deaths in 2012. That’s 1 in every 8 deaths globally.

Health and Climate Events: 19-27 September 2014

For the complete listing of civil society events, please see:
http://www.climateweeknyc.org/events/

Sunday, 21 September

Event Title: People’s Climate March – UWS to Union Square

Media coverage/billed as major public event: coinciding with 1500 other marches and actions in over 130 countries elsewhere in the world.
See http://peoplesclimate.org/ for a complete list and further information.
http://www.climateweeknyc.org/events/peoples-climate-march
Health group: http://peoplesclimate.org/health/

Monday, 22 September

Event Title: Action in Climate Change and Health
When: 0800 – 1400, 22 September
What: A day long health and climate summit on achieving the health benefits of mitigation.
Hosted by the Global Climate and Health Alliance, American College of Sports Medicine, Public Health Institute, and the University of Wisconsin.
Speakers include:
- Boris Lushniak, US Surgeon General
- Gina McCarthy, Administrator, Environmental Protection Agency
- Richard Horton, Editor of the Lancet
- Maria Neira, Director, World Health Organization Department of Public Health and Environment
- Jeff Thompson, CEO of Gundersen Health

Where: Grand Hyatt Hotel, New York. 109 East 42nd Street at Grand Central Terminal
http://climatehealth-sideevent.org
Event Title: Sustaining Health: Linking Environment, Nutrition and Health

When: 1430 – 1800, 22 September
What: An evening event on the relationship between environment, nutrition, and health. Co-organised by the Wellcome Trust, Meteos, and Columbia University’s Mailman School of Public Health & International Research Institute for Climate and Society.
Where: Columbia Club, 15 W 43rd Street, New York

http://www.climateweeknyc.org/events/sustaining-health-linking-environment

Event Title: Business, Health and Climate: Join the Conversation
When: 1830 - 2030, 22 September
Organized by: University of Wisconsin Global Health Institute & Gundersen Health
Speakers include:
- Jonathan Patz, U of Wisconsin 2007
- Jeff Thompson, CEO of Gundersen Health System,
- Moderator: Kizzy Charles-Guzman, former Director of Climate & Health Program for NY City Department of Health

Where: Cornell Club, 6 E. 44th St., New York, NY 10017
Event details:

Tuesday, 23 September

Event Title: UN Climate Summit
Key Times:

- 0800 – 0830: Opening Ceremony – General Assembly Hall
- 0845-1315: National Action & Ambition Announcements – with joint conclusion in General Assembly Hall
- UN Secretary General Press Conference (currently just before Lunch, TBC)
- CCAC Press Conference & CCAC Initiative Press Conferences (early afternoon, TBC)
- 15:30-18:30 – National Action and Ambition Announcements
Event Title: Climate, Health and Jobs
When: 1530 – 1645, 23 September
What: Thematic session as part of the UN Climate Summit, co-organized by the WHO and ILO
Speakers include:
- Co-Chairs: Presidents of Finland and Gabon
- Moderator: Richard Horton, Editor of the Lancet
- Gro Harlem Brundtland, former Prime Minister of Norway; former Director General of the World Health Organization
- Sharan Burrow, Geneal-Secretary, International Trade Union Confederation

Where: Room 1, UN HQ Climate Summit

Wednesday, 24 September

Event Title: EATx Event – Stockholm Food Forum
Where: UN HQ

Speakers Include:
- Børge Brende, Minister of Foreign Affairs of Norway
- Ertharin Cousin, Executive Director of the United Nations World Food Programme
- David Nabarro, UN Special Representative on Food Security and Nutrition
- Jeffrey D. Sachs, Director of The Earth Institute, Columbia University
- Omar Abdi, Deputy Executive Director, UNICEF

What: More than 200 invited thought leaders and practitioners, including representatives from academia, governments, international agencies, business and civil society, will gather to discuss concrete solutions – policies and investments – and how to leverage healthy, sustainable diets for climate change mitigation, environmental protection and public health benefits and ultimately, how to transform awareness and ambitions into an agenda for action.
http://www.eatforum.org/stockholm-food-forum/
Thursday, 25 September

Event Title: Indoor Air Pollution – mobilizing partnerships & increasing awareness

Where: UN HQ

When: 0900-1700, 25 September
